U.S. tanks in Ukraine: What will be the next step?

written by Borotba

January 31, 2023

Statement from Borotba (Struggle), a revolutionary Marxist organization banned by the government of Ukraine.

Jan. 29 — The situation is escalating. The U.S. decision to supply Ukraine with Abrams tanks is very dangerous. It threatens a world war because the design of the Abrams engines requires constant maintenance. There are no specialists for this in Ukraine. Therefore, civilian specialists from the United States will be involved for repair and maintenance, who will work at Ukrainian enterprises that are targets for the Russian army.

Everyone understands that as a result of the fighting, there is a very serious risk that these specialists will be killed. However, the death of a U.S. citizen will allow Biden to demand the introduction of a no-fly zone over Ukraine and may become a reason to declare war.

Thus, Biden intends to use ordinary workers as victims to unleash a war with Russia.

We understand that such a decision by the U.S. authorities carries a huge danger for all humanity. We need all our comrades, all European citizens, and the entire international community to realize that they don't want to be drawn into someone else's conflict.

Neither Russia, nor the anti-fascists of Donbass and Ukraine, have contradictions with common people who live in Europe and the U.S. However, due to such aggressive actions of the American leadership, the world may be on the verge of disaster. Biden doesn't have much time left to live, but we and our children have.

It is very important that everyone who is against such a decision will not be silent. Everyone has to express their position openly on social networks, in progressive media and friendly Telegram channels, at rallies and demonstrations, with the help of leaflets and graffiti.

If we all say NO to the actions of the United States, it will be difficult for our common enemies to take this step.

Comrades! Your solidarity is more important than ever!
